

Moonya contacted me in 2014 to use Repetito, the looper software I developed.

Since then, she has been very proactive and has proposed different developments for the software that she needed for her music.

As an advanced user, she has requested new features like 1) drag and dropping of wave files to facilitate the creation of sessions with pre-recorded audio and 2) precise visual information on volume values to facilitate mixing. She also has been reporting bugs, with specific repro steps for me to understand the issues and fix them.

Working with Moonya has been a very fruitful collaboration, so I warmly recommend her project for KeyChange 2023.

Mathieu Pavageau

Designer and developer of Repetito, a looper software
